INTERNATIONAL APPLICATION PUBLISHED UNDER THE PATENT COOPERATION TREATY (PCT)

<p>(51) International Patent Classification ⁵ : C09B 31/147, 31/30, 33/18, 35/50, 5/02, 25/00, 3/74, 57/00, C09K 19/56, 19/58, 19/30, 19/32, 19/34</p>	A1	<p>(11) International Publication Number: WO 94/28073</p> <p>(43) International Publication Date: 8 December 1994 (08.12.94)</p>
<p>(21) International Application Number: PCT/US94/05493</p> <p>(22) International Filing Date: 20 May 1994 (20.05.94)</p> <p>(30) Priority Data: 93027586 21 May 1993 (21.05.93) RU</p> <p>(71) Applicant (for all designated States except US): RUSSIAN TECHNOLOGY GROUP [US/US]; Suite 214, 1670 S. Amphlett Boulevard, San Mateo, CA 94402 (US).</p> <p>(72) Inventors; and (75) Inventors/Applicants (for US only): GVON, Khan Ir [RU/RU]; pr. Patsaeva, 14-26, Moscow Region, 141700, Dolgoprudnyy City (RU). BOBROV, Yuri A. [RU/RU]; Zelenograd, 906-128, Moscow, 103575 (RU). BYKOV, Victor A. [RU/RU]; Zelenograd, 815-200, Moscow, 103527 (RU). IGNATOV, Leonid Y. [RU/RU]; ul. Angarskaya, 20-3-81, Moscow, 127635 (RU). IVANOVA, Tatiana D. [RU/RU]; Zelenograd, 200-"G"-144, Moscow, 103305 (RU). POPOV, Sergei I. [RU/RU]; ul. Profsoyuznaya, 96-4-11, Moscow, 117485 (RU). SHISHKINA, Elena Y. [RU/RU]; ul. Angarskaya, 57-2-94, Moscow, 127412 (RU). VOROZHTSOV, Georgiy N. [RU/RU]; ul. Sadovaya-Spasskaya, 21-268, Moscow, 107078 (RU).</p>	<p>(74) Agents: SHENKER, Michael et al.; Skjerven, Morrill, MacPherson, Franklin & Frial, Suite 700, 25 Metro Drive, San Jose, CA 95110 (US).</p> <p>(81) Designated States: JP, US, European patent (AT, BE, CH, DE, DK, ES, FR, GB, GR, IE, IT, LU, MC, NL, PT, SE).</p> <p>Published With international search report.</p>	
<p>(54) Title: THERMOSTABLE AND LIGHTFAST DICHROIC LIGHT POLARIZERS</p> <p>(57) Abstract</p> <p>Polarizing coatings are formed from dyestuffs which provide a stable liquid crystalline phase in a wide range of concentrations, temperatures and pH-values. Particles formed by aggregates of the liquid crystal molecules are oriented in a predetermined direction to polarize light. The stability of the liquid crystalline state allows orienting the particles by mechanical forces such as a shearing force applied when the liquid crystal (10) is spread on a support surface (20) by a knife-like doctor (90) or a tension deformation force acting on the meniscus of the liquid crystal deposited between two surfaces (20, 30) as the surfaces are peeled off one another. As a result, the polarizing coatings are formed in some embodiments by simple methods. In some embodiments, the polarizing coatings have a high lightfastness, a high thermal stability, and a high dichroic ratio.</p>
